

## Consumer Products <sup>[1]</sup>

In addition to holding one of the most significant product portfolios of prescription and hospital medicines, and being a market leader in generics, Sandoz also has a range of consumer products and medicines which can be purchased at most major retailers across Canada without a prescription.

We commercialize consumer products that are an extension of our approach to improving access to high quality medicines.

Our existing consumer products portfolio includes a wide variety of therapeutic areas ranging from cough, cold & allergy products to digestive health and pain relief remedies. Our ultimate goal is to continue to grow our offerings and provide a broad portfolio of high quality products to help heal and promote the well-being of consumers. We plan to accomplish this through the development of a deeper and better understanding of our consumers, and ensure we deliver success through our products.

Sandoz Canada is also a proud member of Consumer Health Products Canada, the national industry association representing manufacturers, marketers, and distributors of consumer health products (which includes over-the-counter medications / non-prescription medicines and natural health products).
