Legend		Légende	
Description		Description	
LIVI	Liquid in vial	Liquide en fiole	
LIAM	Liquid in Ampoule	Liquide en ampoule	
LYVI	Lyophilisate in vial	Lyophilisée en fiole	
PSOIJ	Powder for solution for injection/ infusion	Poudre pour solution injectable	
	DIN: Leading zeros have been removed	DIN: Les zéros non-significatifs du début ont été retirés	
	Product Status	Statut du produit	
P	In production	En production	
S	Suspended format	Format suspendu	
S1	Suspended format prioritized for return in production	Format suspendu priorisé pour la remise en production	
D	Discontinued	Discontinué	
	Current allocation rate	Taux d'allocation actuel	
OA	Off allocation	N'est pas en allocation	
	Supply Status	Disponibilité du produit	
AV	Available	Disponible	
ABO	Anticipated backorder in the next 90 days	Rupture de stock prévue dans les prochains 90 jours	
BO	On backorder	En rupture de stock	
EM	Emergency use only. Customers must order directly through Sandoz Canada by completing and submitting an "Exceeding Allocation Order" (EAO) form.	Cas d'urgence seulement. Les clients doivent commander directement chez Sandoz Canada en complétant le formulaire "Commande excédant les allocations" (CEA).	
LS	Competitive BO resulting in limited supply. Closely monitoring stock at wholesalers.	Compétiteur en rupture d'inventaire occasionnant un approvisionnement limité.	
	Limited stock	Approvisionnement limité	
	Insufficient stock	Approvisionnement insuffisant	
	Alternate Material & Additional Information	Article de remplacement & information supplémentaire	
	Change vs previous week	Changement vs semaine précédente	
+	Positive change on P product status since previous report (ex: increased allocation %, later stock depletion date, improved release date)	Changement positif de l'état du produit P depuis le rapport précédent (ex: taux d'allocation augmenté, date prévue de rupture de stock repoussée, relâche prévue devancée)	
-	Negative change on P product status since previous report (ex: decreased allocation %, sooner stock depletion date,	Changement négatif de l'état du produit P depuis le rapport précédent (ex: taux d'allocation réduit, date prévue de rupture de stock devancée, relâche prévue	

Additional Information									
ABO definition	Anticipated backorder dates (ABO) are calculated based on projected national consumption. The actual backorder date at a customer's specific warehouse may differ from the ABO date indicated on this report.								
BO definition	Products are indicated as being on backorder (BO) as soon as the inventory level at the main Sandoz warehouse is less than a pre-determined threshold. There may still be inventory left in some warehouses. Customers are encouraged to verify the inventory status at their usual purchase point.								
Processing of BO products in the allocation tables	<p>Where an alternative exists. Where an alternate product for a product on BO exists, the purchasing history of the BO product has been included in the purchasing history of the alternate product, with an adjustment in allocation for the alternate product. The transfer is now identifiable in the new column "Sandoz Alternate Material", where the alternate product # is indicated. In the case of a temporary BO, the transfer of quantities is temporary and allocation quantities of the original product become available again once the original product returns in stock.</p> <p>Example:</p> <p>When product 2090 CLINDAMYCIN 150MG/ML 1 vial x 120ML fell on BO, the sales history of that product was transferred to product 2080 CLINDAMYCIN 150MG/ML 1 vial x 60ML. Since the original format (120ml) contains twice as much volume as the alternate format (60ml), the transferred quantities were calculated as follows:</p> <table> <tr> <td>Sales history of 2090 CLINDAMYCIN 150MG/ML 1 vial x 120ML:</td> <td>100 units</td> </tr> <tr> <td>Sales history of 2080 CLINDAMYCIN 150MG/ML 1 vial x 60ML:</td> <td>400 units</td> </tr> <tr> <td>Sales history of 2090 converted to equivalent quantities in 2080:</td> <td>100 * 2 = 200 units</td> </tr> <tr> <td>New sales history of 2080:</td> <td>400 + 200 = 600 units</td> </tr> </table> <p>Where no alternative exists. Products in production ("P" status) which are on short-term BO and for which an alternate product has NOT been identified are included in the allocation tables and continue to show quantities which can be ordered. Their inclusion is necessary to allow customers to order the product as soon as it becomes available again without having to wait for the following allocation cycle.</p> <p>Suspended or discontinued products. Products that are suspended or discontinued ("S" and "D" status) which are on BO are removed from the allocation tables.</p>	Sales history of 2090 CLINDAMYCIN 150MG/ML 1 vial x 120ML:	100 units	Sales history of 2080 CLINDAMYCIN 150MG/ML 1 vial x 60ML:	400 units	Sales history of 2090 converted to equivalent quantities in 2080:	100 * 2 = 200 units	New sales history of 2080:	400 + 200 = 600 units
Sales history of 2090 CLINDAMYCIN 150MG/ML 1 vial x 120ML:	100 units								
Sales history of 2080 CLINDAMYCIN 150MG/ML 1 vial x 60ML:	400 units								
Sales history of 2090 converted to equivalent quantities in 2080:	100 * 2 = 200 units								
New sales history of 2080:	400 + 200 = 600 units								
Possible discrepancies between this report and quantities shipped to customers	<p>Discrepancies may occur between the product status (ex: AV, BO) and allocation rate indicated on this report and actual quantities shipped. For example:</p> <ul style="list-style-type: none"> - Some products on short-term BO continue to appear on the allocation tables (as described above). - Disruptions in the replenishment of the distribution centers may cause delays in having product available in time for the allocation cycles. Customers are encouraged to order the product again. 								
Depletion of suspended and discontinued products	<p>Inventory depletion of suspended ("S" status) and discontinued ("D" status) products are indicated as follows:</p> <ul style="list-style-type: none"> - The ABO is indicated when the backorder is anticipated to occur in the next 90 days (based on projected national consumption). - As soon as the inventory level at the main Sandoz warehouse is less than a pre-determined threshold, the status changes to BO and the product is removed from allocation (OA). There may still be inventory left in some warehouses, in which case customers will be able to order the remaining quantities until depletion at their purchase point. - The projected return date for suspended products is indicated in the "Expected release" column. 								

Information supplémentaire									
ABO - définition	Les dates de ruptures de stock prévues (ABO) sont établies à partir d'une projection de consommation nationale.								
BO - définition	Les produits sont déclarés en rupture (BO) à partir du moment où le niveau d'inventaire dans l'entrepôt principal de Sandoz franchit un seuil pré-déterminé. Certains entrepôts à travers le pays peuvent encore avoir des quantités en inventaire. Les clients sont priés de vérifier le statut d'inventaire à leur point d'achat habituel.								
Traitement des produits en rupture dans les tables d'allocation	<p>Lorsqu'un produit de remplacement existe. Si un produit de remplacement existe au moment de la rupture d'un produit, l'historique d'achat du produit en rupture est ajouté à l'historique d'achat du produit de remplacement, ajustant à la hausse l'allocation du produit de remplacement. Le transfert est indiqué dans la nouvelle colonne « Article de remplacement Sandoz », où est inscrit le numéro du produit de remplacement. Dans le cas d'une rupture temporaire, le transfert des quantités est temporaire et les quantités allouées pour le produit original seront rétablies lors de son retour en stock.</p> <p>Exemple:</p> <p>Lorsque le produit 2090 CLINDAMYCIN 150MG/ML 1 fiole x 120ML est tombé en rupture, son historique d'achat a été transféré au produit 2080 CLINDAMYCIN 150MG/ML 1 fiole x 60ML. Étant donné que le volume du format original (120ml) est deux fois plus grand que le volume du format de remplacement (60ml), le transfert de quantités a été calculé de la façon suivante:</p> <table> <tr> <td>Historique d'achat de 2090 CLINDAMYCIN 150MG/ML 1 fiole x 120ML:</td> <td>100 unités</td> </tr> <tr> <td>Historique d'achat de 2080 CLINDAMYCIN 150MG/ML 1 fiole x 60ML:</td> <td>400 unités</td> </tr> <tr> <td>Historique d'achat de 2090 converti en unités équivalentes du 2080:</td> <td>100 * 2 = 200 unités</td> </tr> <tr> <td>Nouvel historique d'achat de 2080:</td> <td>400 + 200 = 600 unités</td> </tr> </table> <p>Lorsqu'aucun produit de remplacement n'a été identifié. Les produits en production (statut «P») qui sont en rupture à court terme et pour lesquels aucun remplacement n'est disponible sont inclus dans les tables d'allocation et continuent d'afficher des quantités qui peuvent être commandées. Ceci permet aux clients de commander le produit dès qu'il est disponible à nouveau sans devoir attendre le prochain cycle d'allocation.</p> <p>Produits suspendus ou discontinués. Les produits suspendus ou discontinués (statuts «S» et «D») qui sont en rupture sont retirés des tables d'allocation.</p>	Historique d'achat de 2090 CLINDAMYCIN 150MG/ML 1 fiole x 120ML:	100 unités	Historique d'achat de 2080 CLINDAMYCIN 150MG/ML 1 fiole x 60ML:	400 unités	Historique d'achat de 2090 converti en unités équivalentes du 2080:	100 * 2 = 200 unités	Nouvel historique d'achat de 2080:	400 + 200 = 600 unités
Historique d'achat de 2090 CLINDAMYCIN 150MG/ML 1 fiole x 120ML:	100 unités								
Historique d'achat de 2080 CLINDAMYCIN 150MG/ML 1 fiole x 60ML:	400 unités								
Historique d'achat de 2090 converti en unités équivalentes du 2080:	100 * 2 = 200 unités								
Nouvel historique d'achat de 2080:	400 + 200 = 600 unités								
Différences possibles entre ce rapport et les quantités expédiées aux clients	<p>Des divergences peuvent survenir entre le statut des produits (ex: AV, BO) et le taux d'allocation indiqués dans ce rapport et les quantités réelles expédiées aux clients. Par exemple:</p> <ul style="list-style-type: none"> - Certains produits qui sont en rupture à court terme continuent d'afficher des quantités dans les tables d'allocation (tel que décrit précédemment). - Des interruptions dans le réapprovisionnement des entrepôts peuvent retarder la disponibilité des produits pour le cycle d'allocation. Les clients sont priés de commander à nouveau. 								
Écoulement des produits suspendus et discontinués	<p>L'écoulement d'inventaire des produits suspendus (statut «S») et discontinués (statut «D») est indiqué de la façon suivante:</p> <ul style="list-style-type: none"> - La rupture prévue (ABO) est déclarée lorsqu'elle est prévue au cours des 90 prochains jours (basé sur une projection de consommation nationale). - À partir du moment où le niveau d'inventaire dans l'entrepôt principal de Sandoz franchit un seuil pré-déterminé, le produit est déclaré en rupture (BO), puis est retiré de l'allocation (OA). Certains entrepôts à travers le pays peuvent encore avoir des produits en inventaire. Les clients pourront dans ce cas commander les quantités restantes jusqu'à épuisement des stocks à leur point d'achat. - La date de retour prévue des produits suspendus est indiquée dans la colonne «Relâche prévue».
